DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-41, 45-56, 102-114, and 124-136, drawn to a method and an apparatus for gain control, classified in class 235, subclass 462.26.
- II. Claims 42-44, drawn to bar code reading system and associating signal processing circuits, classified in class 235, subclass 462.25.
- III. Claims 57-65, 66-101, 115-123, and 137-145, drawn to method of noise control, classified in class 235, subclass 462.29.

The inventions are distinct, each from the other because of the following reasons:

Inventions Groups I, II, and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions can be used in separate systems since each invention has separate utilities.

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are independent or distinct for the reasons given above and the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
